

iBeast Business Solutions, Inc.

The Right Solutions For Your Business

Bridging the gap between your business and technology

Installing or adding to a network takes planning and expertise. It takes more than plugging in another cable. You can rest assured that our certified engineers will design the correct strategy for your network.

Our Team can handle all of your network installation needs. Basic equipment consists of network cards,

cables, data jacks, patch panels and hubs. Advanced networks utilize switches, routers, fiber lines, fast Ethernet, gigabit Ethernet, and dedicated or dialup lines for branch offices and remote users.

With security concerns at an all time high, proper configuration of your firewall, VPN appliance, or network do-

main is the only way to maintain your data security. iBeast works with all top vendors of security hardware and software to ensure that your security solution is safe and cost effective.

When it comes time to support your network, our Call Center is ready to answer all your questions, and even do the work for you.

Your staff becomes our extended team, a gateway to understanding your business needs.

Strategy, Confidence, and Security

iBeast will carefully assess the needs of your company to make sure that you get what you really need. We will review the following:

- Impact of Windows NT or 2000 on your business and applications
- Server hardware/upgrade requirements

- Fault Tolerance planning
- Network infrastructure
- Domain structure
- Client deployment
- Virus protection
- Power Management (UPS)
- Performance Needs

Advanced Services Include:

- SAN design and deployment
- WAN and complex network design and deployment
- Web server integration
- Internet Security Review
- Performance Evaluation

Our Basic Server Installation Package Includes:

- Installation of Windows NT or 2000 Server on compatible hardware
- Formatting and partitioning local hard drives (including raid)
- Installing and configuring network protocols (NetBeui, IPX/SPX, TCP/IP)
- Creating up to 25 user accounts with appropriate security
- Configuring up to 25 client PCs
- Integrating up to 5 network printers
- Create Emergency Repair Disk
- Configure backup software and run first backup of system
- Apply appropriate OS service packs
- Verify hardware and software startup
- Administrator Orientation of Windows NT or 2000 OS

We follow through from start to finish to meet and exceed your expectations.
